KEYWORD INDEX

accuracy, 165
actin fibers, 179
adipocyte, 389
adipose tissue, 389
adrenals, 421
adult blood rheology, 155
age changes, 27
age, 257, 339
age, 339
age-related blood properties, 155
age-related changes, 351
aging process, 103
aging, 17, 37, 47, 59, 67, 81, 113, 165, 179, 187, 249, 263, 297, 317, 359, 379, 389, 409, 421
air pollution, 91
airway responses, 91
aminopeptidase, 289
artificial selection, 199
ATP synthesis, 271

basement membrane, 389
biomarkers, 199
blood flow impairment, 155
blood viscosity, 155
body composition, 409
brain, 421
brain PGE_2 synthesis, 249
brain regions, 187
brown adipose tissue, 409

calcitonin, 263
calcium, 263
capillary, 389
cardiac output, 329
cardiovascular function, 329
cell aging, 231
cholesterol, 339
cholesterol catabolism, 339
cholesterol synthesis, 339
circadian rhythm, 379
clinical parameters, 103
cluster analysis, 103
cold-induced thermogenesis, 409
conscious rats, 27
cortisol, 379

dealation, 139
2-deoxyglucose, 351
detoxifying enzyme, 373
dietary restriction, 67
DNA, 67, 139
dog, 379
DOPA accumulation, 17
dopamine, 17
Drosophila melanogaster, 359
Drosophila midgut, 297
Drosophila, 139, 199

electron microscopy, 297, 389
endothelium, 389
endotoxin stimulation, 249
enzyme activities, 271
epidermal growth factor, 81
erythrocyte deformability, 155
exercise and sleep, 329
exercise, 91, 317, 421
extravascular catabolism, 27

fetus, 257
Fischer 344 rats, 113
fitness, 317
free radical, 373
free radicals, 59
freeze-etching, 389
FSH, 37

gastrocnemius, 271
genetics of aging, 199
gerontology, 81
glutathione, 59
glycolysis, 271
gonadotropins, 37
growth hormone, 27
growth of T cells, 307
growth, 257

half-life, 27
^{3}H-arginine incorporation, 113
healthy men/women, 91
heart, 421
hemoglobin, 103
history, 231
hormones, 1
hormones aging, 1
human diploid cells, 231
human fibroblasts, 81, 165, 179
human skin fibroblasts, 373
hypertrophy, 257
hypothalamus, 113
hypothalamus aging, 1

immortal cells, 231
immortalization, 179
immunodeficiency, 289
importance, 1

in vitro, 231
in vitro senescence, 307
in vivo aging, 373
in vivo perfusion, 351
insects, 59
internalization, 81
intestinal glucose transport, 351

LH, 37
lifespan, 139
lifespan extension, 199
lighting, 37
lipid peroxide, 103
lipofuscin, 127
litter-size, 257
liver, 271
long-lived strains, 199
longevity, 359

male rat, 37
malignant transformation, 179
metabolic rate, 59
methylene blue derivative, 103
microtubule alteration, 47
mitochondria, 139
mitochondrial GDP binding, 409
monoamines, 421
morphology, 127
morphological heterogeneity, 47
morphometry, 127, 297
mouse, 127, 289
muscle growth/atrophy, 67
muscle mass, 271

neonatal T-cell cultures, 307
neuroendocrine-immune interactions, 1
neuroendocrinology aging, 1
neurohypophysis, 113
nocodazole, 47
nucleus accumbens, 17

older adults, 329
3-O-methylglucose, 351
oxidative phosphorylation, 271
oxygen consumption, 139
ozone, 91

parathyroid hormone, 263
paromomycin, 165
peroxide damage, 373
physical activity, 139
physiological aging, 317
placenta, 257
plasma membrane, 389
processing, 81
progesterone, 257
protein breakdown, 67
proteins, 187
protein synthesis, 67, 165
pulmonary function, 91

rat, 257
rat brain, 187
rate of living, 359
rats, 351
receptor, 81
revolution in science, 231
ribosome, 165
RNA, 67

sensory and motor performance, 317
serine proteinases, 289
serum lipids, 339
silver stain, 187
sleep physiology, 329
spleen aging, 289
spontaneous locomotor activity, 359
stereology, 389
striatum, 17
subcellular alterations, 297
substrate oxidation, 271
synthesis, 17

T-cell cultures, 307
temperature, 59, 139
thiobarbituric acid, 103
thyroparathyroid glands, 263
thyroxine, 379
two-dimensional gel electrophoresis, 18

uterus, 257

vasopressin, 113
vasopressin transport, 113
viral vaccines, 231
vitamin E deficiency, 127

WI-38, 47
